

# Track your goods and equipment **anytime, anywhere**

What if you could..

- ▶ Know where your goods are in real time
- ▶ Get alerts when there are temperature changes, shock, or tampering
- ▶ Be ensured about the safety and security of your goods

## Introducing ToTrak

Powerful tracking made easy

Our wide range of small IoT sensors connect directly to the cloud and provide tracking across land, sea, and air. Sensors can be placed in boxes, specialty packaging, pallets, containers, or trailers for:

### Live shipment monitoring

Track real-time location and set alerts for when goods start or stop moving, take a different route, when estimated arrival time changes, or when the shipment has been delivered.

### Cold chain monitoring

Quickly detect temperature and humidity problems, shock, or tampering for perishable or sensitive goods. Minimize damage by responding immediately.

### Asset tracking

Monitor asset movement and utilization to reduce loss and improve cost savings, predictive maintenance, route optimization, and fleet management.

We help you recommend the right combination of sensors for every use case.
